

ELECTRICAL SERVICES

Embee Power is a division of Embee Technologies. We provide creative solutions to minimize cost without compromising quality. We understand that every electrical need is unique. Our highly skilled technicians will work with you to ensure the job is completed on time and on budget. We have a strict working policy and all standard protocols are adhered to. Fully insured and licensed.

Complete Commercial Electrical Services

- Surge Protection
- Data Center Installation
- Installation, Upgrading and Replacement of 3-phase electrical panels
- Outdoor and Security lighting
- Wiring Strip Malls and Retail complexes
- Safety inspections
- Installation of meters
- Troubleshooting, Moves, Repair, Changes and Additions in wiring.

ABOUT OUR COMPANY

Embee Technologies and Embee Power deliver a unique approach integrating our structured cabling, wireless LAN, DAS, point to point/Multipoint and electrical services into a comprehensive turnkey solution. Through our strategic process, we offer design, engineering and implementation for all project requirements. From the inception of a design to the final stages of a large construction project, Embee assist clients in saving both time and money. Employing best in practice experts with the most advanced technical and industry knowledge. Embee delivers quality projects on time while adhering to the strictest safety guidelines, industry standards and specifications.

Our core competencies include:

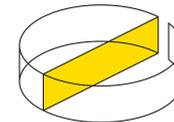

- Structured Cabling
- Wireless LAN design & implementation
- Wi-Fi mapping, design and installations
- Mission Critical Data Centers
- Point to point/Multipoint Antenna installations
- Full electrical services
- Providing the best in practice solutions for companies looking to maximize return on their investments.

STRUCTURED CABLING/FIBER OPTICS

We specialize in high-speed LAN/WAN connections. We recognize that convergence of voice and data requires that your network infrastructure be designed with a higher level of expertise, dependability, and security. This assurance is critical in today's high technology, high-speed, high-demand network environments.

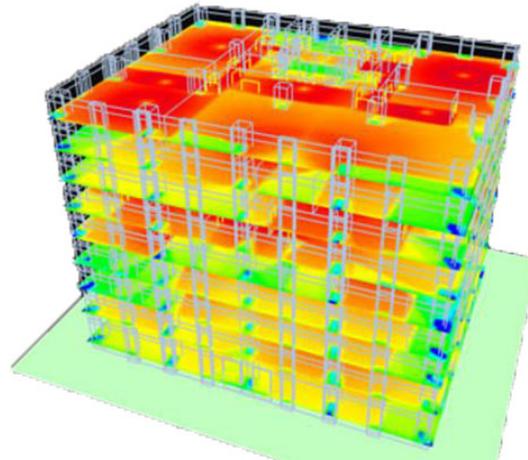

WI-FI & DAS DESIGN & IMPLEMENTATION

Embee WiFi heatmaps allow us to perform WiFi site surveys easier and faster. By analyzing the coverage and the correct propagation of your WiFi network signal to improve its performance.

By performing WiFi measurements, the system captures the WiFi traffic and stores details of the devices, its signal level and other relevant data to make maps with detailed coverage of each access point and to generate editable reports automatically with a diagnosis and advice to improve it.

Embee Distributed Antenna Systems (DAS) eliminates dead spots for cellular handsets, iPads, and laptops. This provides clients and employees seamless voice and data communication wherever they are and Operators who need to increase capacity.

For an indoor DAS (iDAS) network, remote antennas are strategically placed throughout a building and connected with fiber to a single hub containing the wireless service provider's equipment. This single system allows wireless carriers to tailor their RF signal to their specific coverage and capacity needs.

POINT TO POINT WIRELESS SOLUTIONS

Whether you need an alternative to a gigabit fiber connection across the street, within a campus or beyond the capabilities of your existing infrastructure, we can provide a reliable redundant backup or a secondary source to your network. Gigabit connectivity may be swiftly established for, healthcare organizations, commercial enterprises and educational institutions facilitating quality voice, video and data.

Wireless interference-free connectivity is enabled for geographically distributed campuses, resolving IT challenges, such as network traffic growth, security concerns and increasing operating costs. Embee's dynamic wireless radios connect new/existing, temporary/permanent facilities, creating one core network. We develop solutions to fit your needs and requirements.
